Question 1: Exam Score Summary

Source Code: Q1.cs | Execution Status: Success

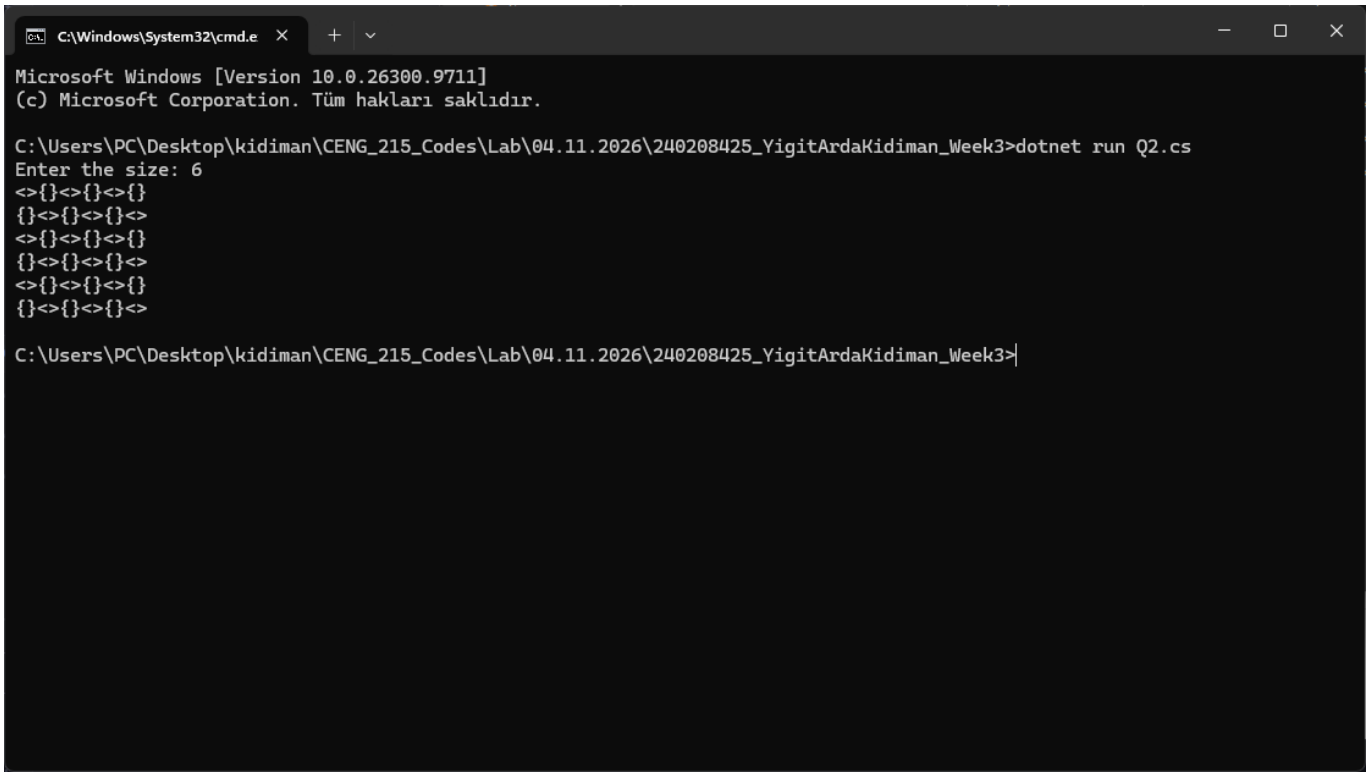

Repeatedly reads integer exam scores until -1 is entered; validates range (0-100), counts passes (>=60) and fails, and calculates average.

Question 2: Pattern Design

Source Code: Q2.cs | Execution Status: Success

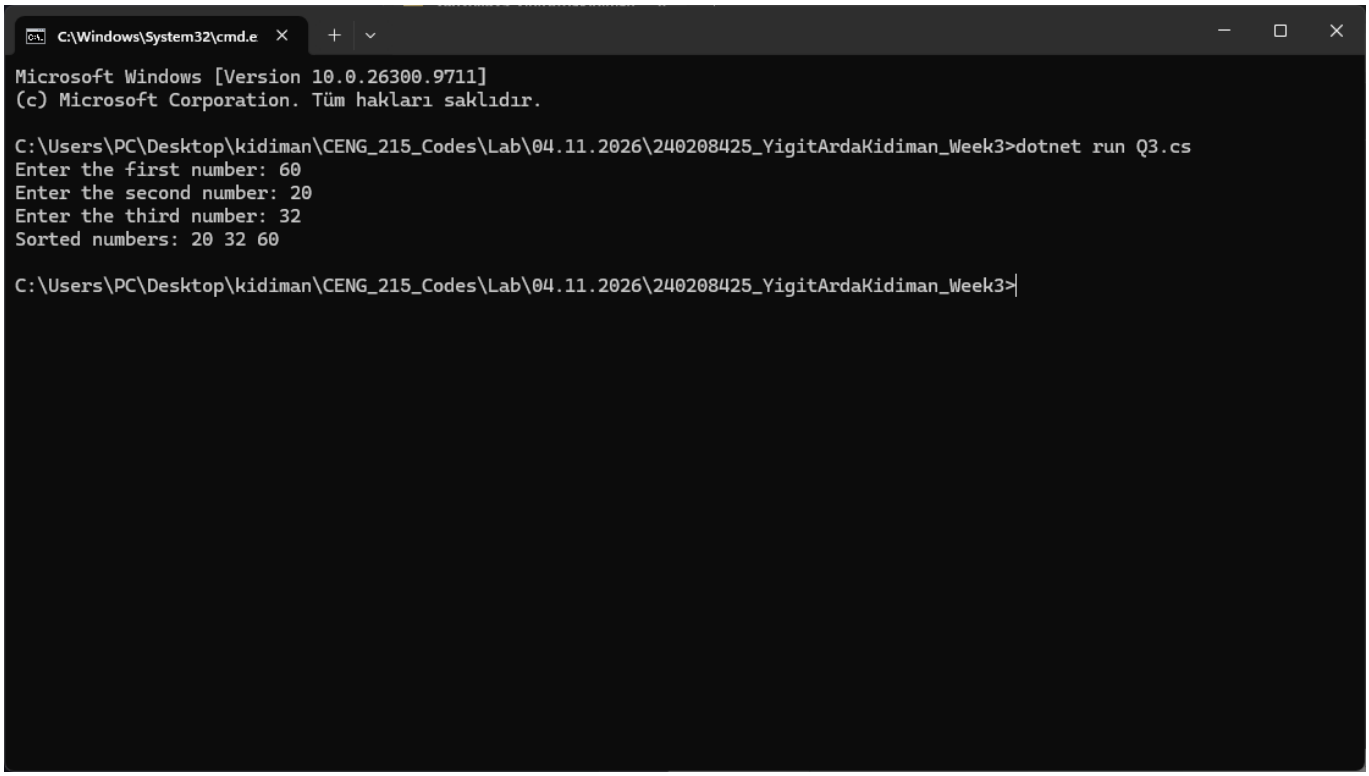

Prints an N × N checkerboard pattern using <> and {} based on whether (row + column) is even or odd.

Question 3: Sort Three Numbers

Source Code: Q3.cs | Execution Status: Success

Reads three integers and displays them in ascending order using conditional if statements and a temporary variable.

Question 4: Hollow Rectangle

Source Code: Q4.cs | Execution Status: Success

Asks for the number of rows and columns and prints a hollow rectangle using asterisks (*) for borders and spaces inside.
