Question 1: Separate Even and Odd Numbers

Source Code: Q1.cs | Status: Successfully Executed

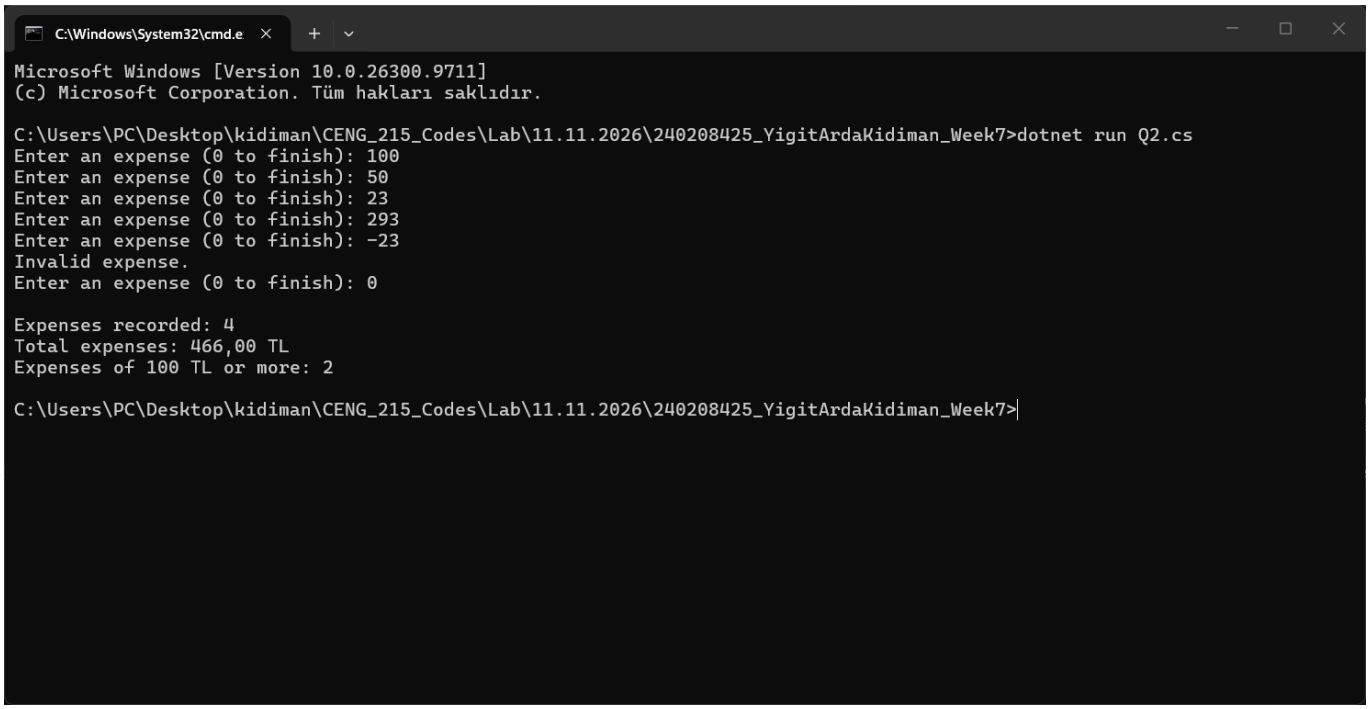

Reads a non-negative integer N, separates integers from 0 to N (inclusive) into even and odd arrays, and prints them separately using foreach.

Question 2: Daily Expense Tracker

Source Code: Q2.cs | Status: Successfully Executed

Records positive expenses in a List<decimal> until 0 is entered, filters out negative amounts with an error message, and calculates total sum and count of expenses of 100 TL or more.

Question 3: Match Students with Courses

Source Code: Q3.cs | Status: Successfully Executed

Reads student count, stores student names and course names in two 1D string arrays, combines each pair into a 2D string[,] array, and prints all pairs line by line.
